COVID-19 State Reports

CDC COVID-19 Community Levels

1. COVID-19 Community Levels used for Most Settings

Layered prevention strategies can help limit severe disease and reduce potential strain on the healthcare system. [CDC COVID-19 Community Levels](#) are a tool to help communities and individuals determine what prevention measures to take.

The COVID-19 community level is determined by the higher of the new hospital admissions and inpatient beds metrics, based on the current level of new cases per 100,000 population in the past 7 days. COVID-19 community levels are classified as low, medium, or high as follows:

New COVID-19 Cases Per 100,000 in the past 7 days	Hospitalization Indicators	COVID-19 Community Levels		
		Low	Medium	High
Fewer than 200	New COVID-19 admissions per 100,000 population (7-day total)	<10.0	10.0-19.9	>20.0
	Percent of staffed inpatient beds occupied by COVID-19 patients (7-day average)	<10.0%	10.0-14.9%	>15.0%
200 or more	New COVID-19 admissions per 100,000 population (7-day total)	NA	<10.0	>10.0

The following table includes recommendations for protecting yourself, your family, and communities. Additional information can be found at: https://www.cdc.gov/coronavirus/2019-ncov/science/community-levels.html#anchor_47145.

Local Levels:
Somerset County:

LOW

Morris County:

MEDIUM
